INTRODUCTION

Alfresco is an open platform for ECM and BPM software meant to achieve perfect coordination among people, content and processes. Alfresco Software Inc has developed the software to suit modern business needs without affecting the quality standards. Headquartered in Palo Alto, CA, the 2005-founded firm has now established its base firmly with worldwide partners across multiple global locations. Every user relying upon the software will become a part of the Alfresco Network realizing the best services due to which undergoing digital transformation becomes easy.

Etymology

Alfresco means - *In The Open Air* - suits the company's belief of working with an open heart in whatever services they provide or products they offer.

THE ALFRESCO PLATFORM

The Alfresco platform reckons upon three fundamental aspects, which are considered as the benefits as well offered to the clients.

- **Simplicity**

Alfresco products are adapted faster as per user requirements because of the simplicity maintained. The biggest advantage realized is customized information made available instantly to the users. As far as the businesses are considered, the concerned professionals get to make use of their favorite applications by connecting to the devices of their choice.

- **Adaptability**

Increasing number of customers believe in digital transformation in order to serve their customers better? Believing in Alfresco products for them will gain valuable insights into a wide range of features besides optimizing information. Perhaps, enterprises with a strategic viewpoint will be able to achieve a phenomenal growth rate because of the quicker adaptability feature.

- **Security**

Enterprise level security is guaranteed for growing businesses due to which sensitive information and confidential content could still be shared among selective networks. Compliance is one factor that is strengthened to the core with multilevel security standards maintained throughout.

TAASHEE LINUX SERVICES AND ALFRESCO SOFTWARE
