

# Ecosystem Management Platform

## Product Overview

With increasing collaboration between companies throughout the globe in multiple projects entailing hundreds of contracts and project documents, it becomes extensively difficult for the concerned parties to keep track of documentary resources. This often leads to unwanted delays in various project stages as well as confusion between project partners. Taashee's flagship blockchain based Ecosystem Management Platform (EMP) aims to address this very issue.

## Product Background

This product was developed for Alfresco, UK (Taashee being an Alfresco Gold Partner) and the end user was a renowned financial company. The end user had a requirement of signing, verifying and modifying multi-patriate contracts based on the dynamic workflow design UI defining each party, percentage stake, signing phases and final endorsing. This was implemented using IBM Hyperledger running in standalone mode while the workflow & document lifecycle management was done at the Alfresco level.

## Product Details

The contracts and related project documents are hosted and their metadata, indexing and lifecycle are managed using Alfresco. We can define the parties involved using their names, stakes and their phases of signature in the Workflow Editor. The Workflow Editor is linked to the Alfresco module and the contracts thus created, are managed as block-chains by the Hyperledger.

In this model, Hyperledger maintains and manages all activities related to the contract during its tenure. For example, if at a particular phase in the project, the parties involved need to sign a contract, Hyperledger will make sure that all of them get reminders for it, the signed contracts are safely stored or forwarded and the project does not move on if any of the parties are yet to sign the contract.

## Advantages

- ◆ Enhanced security cover provided to contract documents due to blockchain based encryption
- ◆ Increased visibility and transparency at all stages for all parties involved in the contract
- ◆ Reduced project delays and increased trust between partners
